MERT DOĞAÇ UZDURMAZ

Electrical-Electronics Engineering Student | Automation & Power Systems
Turkey | +90 543 335 20 05 | mduzdurmaz2005@gmail.com

PROFESSIONAL SUMMARY

Fourth-year Electrical-Electronics Engineering student at Yaşar University, graduating in 2027, with hands-on internship experience in industrial automation, motor control circuits, electrical panels and PLC systems. Experienced in MATLAB/Simulink, LTspice and Proteus through coursework and projects. Seeking an internship or junior position in automation and power systems.

EDUCATION

Yaşar University, Turkey **2023 - Expected 2027**
B.Sc. in Electrical-Electronics Engineering (4th year)
Relevant Coursework: Circuit Analysis, Digital Design, Power Systems, Feedback Systems, Microcontrollers, Signal Processing

INTERNSHIP EXPERIENCE

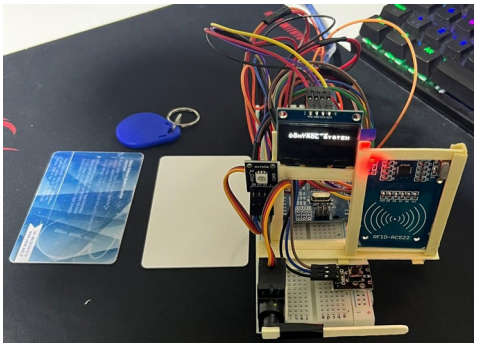

Maintenance Intern, ASTEMO **Jul 2026 - Aug 2026**
- Worked in the Maintenance Department and learned how industrial automation systems operate.
- Studied electrical panels and PLC systems, including how sensors communicate with a PLC.
- Observed motor control with contactor circuits and the automation process flow.

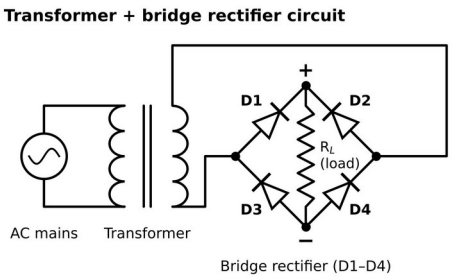

Electrical-Electronics Engineering Intern, HABAŞ **Jun 2025 - Jul 2025**
- Completed a voluntary internship in the Electrical-Electronics Engineering Department.
- Learned the working principles of industrial automation systems and motor control with contactor circuits.

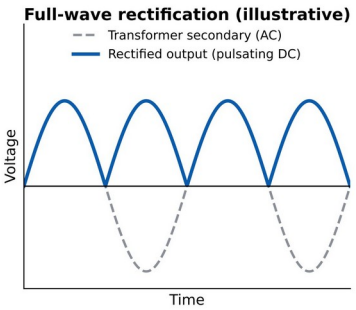

PROJECTS

RFID Card Access Gate Controller **Microcontroller Course**
- Developed a microcontroller-based gate control system that reads RFID cards and tags to grant access.
- Built with an RFID-RC522 reader, OLED status display, RGB LED, push button and a servo-driven gate arm.

Bridge Rectifier Power Supply with Transformer **Circuit Theory Course**
- Built a transformer-based power supply circuit using a diode bridge rectifier.

Left: RFID gate prototype. Right: bridge rectifier circuit and illustrative output waveform.

TECHNICAL SKILLS

Engineering Software: MATLAB, Simulink, Simscape, LTspice, Proteus
Automation: PLC fundamentals, sensors, electrical panels, contactor motor control
Programming: MATLAB (feedback systems, signal processing), Python (basic)
Tools: Microsoft Office, Canva

CERTIFICATIONS

- MathWorks: Control Design Onramp with Simulink, Simscape Onramp, Simulink Fundamentals, Simulink Onramp, Power Electronics Simulation Onramp, Signal Generation and Resampling
- Occupational Health and Safety Certificate (2025)
